Medicine, King Faisal Specialist
Hospital and Research Centre (Gen. Org.)

Objectives

The objectives of this one-day workshop are to provide participants with an up-to-date review of the most recent, clinically relevant developments in the use of ultrasound in critical care setting.

After the Training, the Attendees shall be able to understand the following:

- To explain the basic physics of ultrasound and the various settings to produce the best image acquisition.
- To describe the normal physiology and anatomy pertinent to the ultrasound examination in the critical care patient.
- To demonstrate the normal variants and the important pathology in the FAST exam, abdominal and retroperitoneal structures.
- To demonstrate role of cardiac imaging in the critically ill patient.
- Focused hands-on instruction with the use of phantoms, live models and real patients.

Target Audience

- Emergency Physicians
- Critical Care Physicians
- Pediatricians
- Trauma Surgeons
- Internal Medicine Physicians
- Family Medicine Physicians and
- Those involved in performing point of care ultrasound in the critical care setting.

Topics Covered

- Basic Training in Point of Care Emergency Ultrasound
 - Lectures
 - Hands-on Sessions
